# Global Warming: A Threat to Our Planet

## Introduction

Global warming refers to the long-term heating of Earth’s climate system observed since the pre-industrial period due to human activities.

## Causes of Global Warming

Global warming is mainly caused by:

- Burning of fossil fuels
- Deforestation
- Industrial processes

## Abbreviations and Citations

The IPCC provides comprehensive reports on climate change impacts.

According to *Climate Change: The Facts*, human activities have significantly contributed to global warming.

## Definitions

*Greenhouse gases* are gases that trap heat in the atmosphere, contributing to global warming.

## Emphasis and Strong Text

**Immediate action** is required to mitigate the effects of global warming.

We must *urgently* address climate change to protect our planet.

CO<sub>2</sub> levels have reached unprecedented levels. This is the 21<sup>st</sup> century's biggest challenge.

Climate data has been ~~underestimated~~ updated to reflect more accurate predictions.

Some ~~outdated~~ theories have been debunked.
